Supplementary Fig. 2. Effect of AP-1 on the *ST3GAL5* transcription. After 24 hours of siRNA transfection to knockdown AP-1, the reference (g.-1051G) or variant (g.-1051C) reporter constructs were transfected into HCT-116 cells. Then, luciferase activities were determined after 48 hours. **p<0.01 vs. the luciferase activity with the negative control siRNA, †p<0.05, ‡p<0.01 vs. the luciferase activity without the siRNA. EV, empty vector; siRNA, small interfering RNA.
